- Smoke/motion/glass breakage sensors
- IV Pump and Ventilator alarm notification
- Repeaters for large area coverage

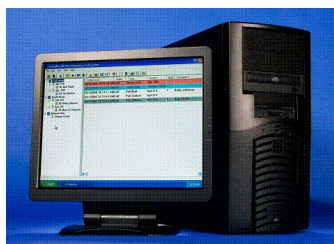

Inexpensive & Easily Expandable

Whether your clinic is large or small, Vision systems provide an inexpensive wireless solution for your nurse call requirements. The console simply plugs into a standard electrical outlet and "hears" the fully supervised wireless signals from all Vision stations and transmitter devices. Stations can be easily flush mounted in existing walls for a clean, finished appearance and are powered by a 3V user replaceable lithium battery with a 4 to 5 year life and low battery indication.

Room Status, Text Messaging & More

When any call station button or device is activated, a wireless signal is instantly sent to the nurse, doctor or roomer to indicate that a patient is in the lobby waiting for a particular doctor or that assistance is needed in the exam room, procedure room or restroom. If desired, corridor lights with up to four colors can be added above the exam room doors. The system provides exam room status from wireless call stations and bathroom pull stations plus staff notification for patients waiting in the lobby and telephone calls on hold. Information can be displayed on your choice of LCD monitors, wireless consoles, wireless LED readerboards, alpha-numeric pocket pagers and cellular phones.

VisionLink Video Display
console PC offers scheduler, silent paging, management reports and so much more.

MicroVision 200Z Console
with audible alpha-numeric alarm display, LED status indicators and six relays.

MicroVision 400Z Desktop
Console with programmable alpha-numeric display and optional staff pocket paging.

Call Today

Our experienced and knowledgeable technical staff would be happy to answer your questions or give you ideas on how to put wireless to work for your facility.
