Vision$_{Pro}$™

Wireless Emergency Call Made Simple

Start Small, Think Big!

VisionPro utilizes the Windows 7® platform combined with 900 MHz spread spectrum wireless technology to link your staff or residents to on-site security personnel. With VisionPro you the ability to start small and think big. Use wireless emergency call stations and devices that notify pocket pagers and display the device, room number or employee name initiating the alarm. Add Locators to display the person's location when alarm was originated with notification to cell phones, two way radios, email, cell phones. Spectralink wireless phones or central monitoring station. Escalation continues progressive notification until the alarm is cancelled at the originating device.

Flexible Software

Flexible fields in the software allow you to easily fill in the type of device, priority level, name description and emergency notification information as well as many other areas allowing you to customize the system to your specific requirements. Call analysis reports show all alarm events and how quickly staff responded. Text messaging to pagers or wireless phones eliminates the need for noisy and disruptive overhead paging. Need more? We can write custom software for your special application!

Monitoring Convenience

Multiple consoles can log on to the system to view specific areas or an entire campus. Security personnel can view and respond to on-screen alarm information or receive wireless notification on a variety of wireless phones, pagers, and two way radios. Additionally the system can monitor restricted areas via wireless glass-break, motion and door/window transmitters as well as water leakage, pumps, generators, temperature changes - any device that provides a contact closure when it alarms. Each device can be scheduled to send alarm notification complete with name, location and priority level.

The 900MHz Advantage

Because the FCC allows higher transmit power for 900 MHz spread spectrum systems, Vision Pro provides superior in-building range and up to 10 times the range of 300 MHz products. It is also fully supervised and can transmit up to every 10 seconds to indicate low battery or inactive status. In contrast, it can take some wireless systems up to 24 hours to report a malfunctioning transmitter.

Ensure personnel and resident safety

Wireless Emergency Call System

STANDARD FEATURES

- 900 MHz spread spectrum technology
- Windows 7© operating system
- Alarm calls reset at the source
- Easy user programming
- User replaceable long-life battery
- Supports 65,000 transmitters
- Call history log
- Fully supervised
- Low battery alert
- Password protection
- Visual/audible alarm prioritization
- User replaceable long-life battery

EQUIPMENT OPTIONS

- Wireless pendant, belt & wrist transmitters
- Wireless emergency pull stations
- Patient, code blue and duty stations
- Two way radio interface & voice alarm
- Corridor, zone and strobe annunciation lights
- Alpha-numeric pocket page alarm notification
- Wireless consoles can select response areas
- Door/window/bed exit notification
- Smoke/motion/water/glass breakage detection
- Resident or staff check-in status
- ADA compliant two-way area speakers
- PC, standard and mobile master Stations
- Locators for position of pendant alarms
- Beacons can alarm when a pendant exits
- Statistical call analysis reports
- Wireless repeaters for wide area coverage

APPLICATIONS

- Schools & Campuses
- Manufacturing
- Psychiatric Clinics
- Assisted Living Facilities
- Convalescent Centers
- Outpatient Hospitals/Wards
- Gated Communities
- Retirement Apartments
- Office Buildings
- Correctional Institutions
- Airport Security
- Equipment Monitoring
- Historic Buildings
- Temperature Monitoring
- Water Detection
- Motion/Glass Breakage
- Equipment On/Off Notification

Call Today

Our experienced and knowledgeable technical staff would be happy to answer your questions or give you ideas on how to put the Vision family of wireless products to work on your campus.
